

I have been a subscriber to XM Satellite Radio for 1 1/2 now. I recommend to my friends and business partners to obtain satellite radio for their vehicle, home and office.

I do not believe that National Association of Broadcasters should be able to dictate to me, a subscriber, what I can or can not listen to. I enjoy the commercial free stations. There is a large variety of music, sports, news, commentary and weather. It is the best kind of listening entertainment. This quality of listening entertainment is not available anywhere else. The average person spends approximately 30% of their day in their vehicle listening to entertainment, weather and traffic.

The consumer should have the right to choose who and what they listen to. Local radio is not good enough anymore. They are behind the times. I oppose the HR 4026 and will encourage everyone else to do so.
